

459 Light Base Sheave

Makes Pulling Wires for Parking Area Lights Easier

Pulling wires into parking lot light bases can be difficult and tiring. It often requires one person to stand on the light base and pull up on the pulling rope and another person to guide the wires into the conduit on the feeding end. If you want to make this task faster and easier, the 459 may be the product you need.

The 459 attaches to light bases using the same mounting bolts that are used for the light pole. Simply remove the nuts from three of the pole mounting bolts, set the 459 over the bolts and then reinstall the nuts. The 459 has mounting slots so it will work with bolt circles from 7.8" (198 mm) diameter through 14.8" (376 mm) diameter.

The 459 improves the pulling operation on both the pulling and feeding ends. On the pulling end, the pulling rope goes over the sheave so a person standing on the ground can pull the rope horizontally. On the feeding end, the 459 guides the wires directly over the center of the bolt square into the conduit, usually eliminating the need for a person.

The base of the 459 is made from 0.250" (6.3 mm) steel and the sides are made of 10 ga. (3.6 mm) steel. The welded structure provides a rugged and durable platform for wire pulling.

PRODUCT FEATURES

- **Mounts directly** to existing square light pole bolt patterns.
- **Slotted mounting holes** fit a wide range of bolt circle sizes.
- **Tall enough** to position sheave above most conduits.
- **Rugged welded steel** base structure.

SPECIFICATIONS

Overall Height:	14-1/2" (368 mm)
Weight:	18 lb. (8.2 kg)
Bolt Circle Capability:	7.8" (198 mm) to 14.8" (376 mm) diameter
Maximum Mounting Bolt Diameter:	1" (25 mm) diameter at 7.8" (198 mm) bolt circle 1-1/2" (38 mm) at 14.8" (376 mm) bolt circle
