PRESS RELEASE

Greenlee Introduces NETcat[®] Micro NC-100 VDV Wiring Tester *Fast, Accurate Checking of VDV Cables and In-Wall Testing Made Easy*

ROCKFORD, Ill. January 22, 2007 —Greenlee, a Textron company (NYSE: TXT), introduced its NETcat[®] Micro NC-100 digital voice, data and video wiring tester, a new member of its growing VDV tool family. The NC-100 verifies the integrity of shielded and unshielded twisted pair cables, coaxial cables and telephone wiring in a single, compact, handheld device. By using high-speed digital technology, this new product can verify wiring continuity and check for the correct allocation of wire pairs.

“The NETcat Micro NC-100 is ideal for people doing communication installation and maintenance work because it provides quick verification of several common types of communication wiring: structured LAN wiring, coaxial cabling and telephone wiring,” said Jim Carefoot, VDV product manger.

The NETcat Micro NC-100 has four durable keys to select the test and wire tracing modes. It detects shorts, opens, reversed polarity, crossed and split pairs and warns of hazardous voltages. The NETcat Micro generates three distinct, selectable precision tone patterns for cable tracing and troubleshooting.

A wide range of tracing tone options makes it easy to track and identify high performance Category 5, 6, or 7 wiring, and like many new Greenlee products the tracing tones are compatible with Greenlee’s 200XP noise-immune tone probe.

—more —

Test results are shown on a backlit display. A nested remote allows end-to-end testing of all wiring types whether in the same room or at a far jack. A complete set of common connector types are standard (telephone, LAN and coax) is supported and an auto-off function helps extend the 9-volt alkaline battery life.

For more information on the new NETcat Micro NC-100 digital voice, data and video wiring tester, or other products from Greenlee, a Textron company, call 1-800-435-0786 or visit
