**GREENLEE'S PAIRMAPER[®] KIT IDENTIFIES
WIRING FAULTS IN VOICE AND DATA NETWORKS**

A single user can properly identify up to four different office outlets from a single end.

ROCKFORD, Ill. —Greenlee now offers a new and improved PM-400K PairMapper[®] Kit, a wiremap tool designed to aid network installation and maintenance personnel in the quick and easy verification of voice and data networks. The PairMapper[®] is a compact, low cost tester used to identify various wiring faults found in 4-pair twisted pair (UTP or STP) cables.

“We’ve made the PairMapper[®] a more cost effective solution, providing an all-inclusive kit that is capable of identifying multiple offices in voice and data networks,” said Rob Bentley product manager. “By distributing the 4 remote identifiers to various offices or outlets, end users can more quickly label each outlet from a central point while also making it easier for future maintenance.”

In addition to determining conditions such as opens, shorts, crosses, reversals and split pairs on a patch cable as short as 16” in length, the PairMapper[®] has a distinctive office identification feature that allows a single user to properly identify up to four individual cables by indicating which remote is attached at the other end with its built-in tone generator. The PairMapper[®] will also send tone to identify a single cable within a bundle. It also offers two distinct tone signals, selectable by the end user.

The PairMapper®, the main unit in the kit, includes a storage area in the base, which will hold any one of the four remote units. This allows the user to do loopback testing on patch cables without the inconvenience of holding two separate units. Other features include a low battery indicator, an auto sleep mode and power off switch that decreases power consumption.

PM-400K PairMapper® Kit/2-2-2-2

The PairMapper® kit itself consists of the main PairMapper® unit, 4 Remote IDs, 4 AAA batteries, 2 12” STP patch cords and a protective, durable nylon carrying case with inside pockets and belt loop.

For more information on the PM-400K PairMapper® Kit, or other voice and data instruments from Greenlee, a Textron company, contact Greenlee, 4455 Boeing Drive, Rockford, Illinois 61109-2988. Phone (815) 397-7070. Fax (815) 397-1865 or visit the website at www.greenlee.com.

Textron Inc. (NYSE: TXT) is a \$10 billion multi-industry company with more than 43,000 employees in 40 countries. The company leverages its global network of aircraft, industrial and finance businesses to provide customers with innovative solutions and services.
